SISTEMA Bronzo 5000/S Impero

Il sistema Bronzo 5000/S Impero è realizzato con una speciale lega di ottone, detta anche "bronzo edile" che non necessita di alcuna protezione superficiale o manutenzione.

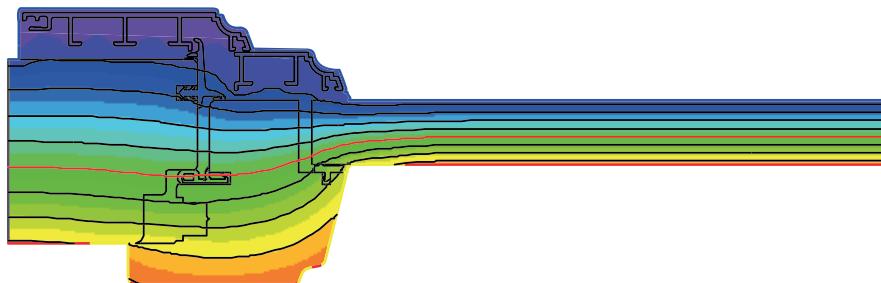

La patina che si forma naturalmente costituisce il migliore e più duraturo schermo di protezione e garantisce una longevità al serramento.

Brunitura: Il trattamento di brunitura eseguito dopo la saldatura dei telai accelera questo processo naturale, formando una patina che può essere uniforme o invecchiata con effetto bronzo antico.

Ramatura: Il trattamento di ramatura, eseguito dopo la saldatura dei telai mediante applicazione di uno speciale prodotto sulla superficie del profilo, reagisce sulla parte in rame della lega producendone l'effetto di invecchiamento verderame tipico delle statue esposte per lungo tempo all'esterno o dei tetti in rame dei monumenti storici.

Sistema Bronzo 5000/S Impero
design antico e geometrie del passato

telaio: 68X70
anta: 68X81

Legno Tenero Soft Wood

Sistema Bronzo - Sistema Impero

uniform

Requisiti	Norma di classificazione	Caratteristiche
Trasmittanza termica nodo finestra(Uf)	UNI EN ISO 10077-2	1,4 W/m ² · K
Tenuta all'acqua	UNI EN 1027-12208	Classe 9a
Permeabilità all'aria	UNI EN 1026-12207	Classe 4
Resistenza al carico di vento	UNI EN 12211-12210	C4
Capacità portante del dispositivo di sicurezza	UNI EN 14351-1	350 N

Struttura in legno

La struttura in legno è predisposta per l'utilizzo di ferramenta antieffrazione con asse 9 o 13mm.

La struttura, internamente, prevede l'utilizzo di almeno una guarnizione centrale su tutto il perimetro dell'anta o del telaio.

Le specifiche tecniche delle battute e della squadratura sono indicate nel seguente catalogo. Le geometrie interne e la tipologia di vetro sono a discrezione del produttore.

Telai in bronzo

I profili in bronzo vengono realizzati in lega CW618N forniti come da EN12167 e tolleranze DIN17674/4.

Trattamento superficiale di "Ramatura" o "Brunitura"(Richiedere specifica scheda tecnica).

Fissaggio dei telai e altri accessori

Il fissaggio dei telai avviene tramite clips di supporto in materiale plastico fissate tramite vite, o in particolari casi ad incastro, con la parte lignea. Consentono l'unione ottimale tra il legno e il metallo alla distanza di 5mm al fine di eliminare la eventuale condensa e garantire la perfetta aerazione della zona di accoppiamento, nonché l'eventuale smontaggio in caso e consentendo una dilatazione libera da tensioni.

Guarnizioni

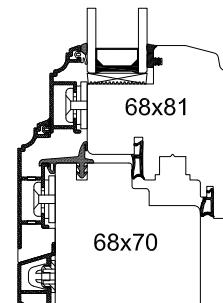

I telai sono rivestiti da una guarnizione perimetrale in EPDM che ne consente l'unione della parte in legno a quella metallica, garantendone la perfetta sigillatura e scarico dell'acqua con incollaggio sugli angoli. Sul vetro viene montata una guarnizione in EPDM coestruso con componente espanso in appoggio sul vetro.

Sul profilo telaio bronzo viene montata una guarnizione IN EPDM coestruso per evitare il contatto diretto tra le componenti metalliche.

Requirements	Classification norm	Features
Thermal transmittance(Uf)	UNI EN ISO 10077-2	1,4 W/m ² · K
Water-tightness	UNI EN 1027-12208	Classe 9a
Air-tightness	UNI EN 1026-12207	Classe 4
Wind-tightness	UNI EN 12211-12210	C4
Load-bearing capacity	UNI EN 14351-1	350 N

Wood structure

The wood structure is designed to implement anti burglary hardware featuring axis 9 or 13mm.

Internally, the structure encompasses at least one central gasket on the whole perimeter either of the sash or of the frame. The following catalogue contains the technical specifications of the rebates for adjusting the tools. The internal silhouette of the profiles and the typology of glazing are at the discretion of the window manufacturer.

Bronze frames

The profiles are made of bronze alloy CW618N provided as per EN12167 and tolerances DIN17674/4.

Surface treatment of "Copper plating" or "burnishing" (Request specific data sheet).

Assembly of the bronze frames and other accessories

Alu frames are fixed to the wood by means of plastic clips, either screwed to or embedded into the wood. The clips allow an optimum space between the wood and the metal frames at the correct distance of 5mm, thus allowing neutralization of the materials' dilatation, moisture removal through good ventilation, as well as easy release of the alu frames by rotating the clips.

Gaskets

The alu frames are equipped with a perimetral gasket in EPDM (with glued corners) aimed at bridging the gap between the wood part and the metal part, thus ensuring perfect sealing and water drainage. Glass is backbedded by a gasket in EPDM that features coextrusion between soft and harder rubber. The alu frames are equipped with EPDM gasket to avoid direct contact between glass and metal components.

Istruzioni per l'incollaggio degli sprossen al vetro:

- Pulire la superficie del vetro con solvente alcolico;
- Pulire la superficie del profilo in bronzo in cui andrà in appoggio il nastro con soluzione LCPRIMER86;
- Fare aderire il nastro al profilo in bronzo e successivamente al vetro, esercitando più possibile una pressione uniforme.

NOTA: la temperatura ideale per l'applicazione del nastro biadesivo è da 20 a 38° C. L'applicazione al di sotto dei 10° C è sconsigliata poiché l'adesivo risulta troppo rigido per aderire in modo appropriato.

Instructions for glueing the Georgian bars onto the glazing

- clean the surface of the glazing with solvent based cleaner
- use LCPRIMER86 to clean the surface of the bronze profile before applying the double sided adhesive tape
- apply the double sided adhesive tape onto the bronze profile first, and then press onto the glazing using uniform pressure
- Please note that: the ideal temperature for applying the double sided adhesive tape is between 20 and 38°C. Application below 10°C is not recommended because the double sided adhesive tape would be too much rigid and would not adhere appropriately.

PORTATA CON N°2 CERNIERE:

150Kg con misura massima porta LxH= 1000x2000mm.

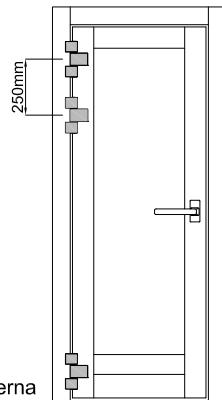

Si sconsiglia l'applicazione su ante di larghezza superiore ad 1mt.
Per altezza superiore a 2 mt e fino a 2,2 mt è necessaria l'applicazione
di una terza cerniera a circa 250mm dalla cerniera superiore(vedi
disegno).

Load with 2 hinges:

150kg with a maximum door WxH = 1000x2000mm.

Should not be applied on doors of width of more than 1m.

*For height greater than 2 meters and up to 2.2 meters, is required the
application of a third hinge about 250mm from the top hinge (see
drawing).*
